

Anti-ink dirty protection design

When pump was clogged and users have to repair, sometimes clogging ink in the hose spouted out to inside viscosity controller box.

It is very difficult to wipe out spouted ink on the parts of viscosity controller.

Remaining ink on the parts will be sticking, and drying.

As a result, inside viscosity controller box were very dirty.

Finally ink dirty parts will be easy to be broken due to sticking ink.

VISCON developed new design Anti-ink dirty protection construction.

VISCON designed Anti-ink dirty panel Anti-ink dirty box which protect parts and air equipments parts from ink dirty.

It is very easy to wipe out spouted ink on Anti-ink dirty panel and on Anti-ink dirty box whose surface are flat.

Viscon Anti-ink dirty protection design can keep inside viscosity controller box clean.

As a result users can avoid damage deterioration of parts.

Other Viscosity controller

(No Anti-ink dirty protection design)

Difficult to wipe out ink, finally sticking ink make viscosity controller box more dirty.

VISCON Viscosity controller

Viscon Anti-ink dirty protection design can keep inside viscosity controller box clean.

Anti-ink dirty box(for air equipment)
